itravel2000 Blocks Spam With PineApp's Mail-SeCure Installed By NCI

IRVINE, Calif.--([BUSINESS WIRE](#))--PineApp™, a global leader in securing networks and email systems, in partnership with NCI, announced today that itravel2000, one of Canada's largest on-line travel agencies, has deployed PineApp's Mail-SeCure perimeter security appliance to protect them from malicious spam attacks. "itravel2000 is committed to offering our customers the best vacation value and the most convenient ways to book," says Mike Baxter, VP - Technology, itravel2000, "We receive more than 35,000 visits daily. Our customer responsiveness is of paramount importance to us and we can't afford to be distracted by massive amounts of spam and other undesirable non-work related emails. We turned to NCI, our trusted IT security solutions supplier who recommended PineApp."

According to NCI's VP of technology, Eugene NG, "itravel2000 was looking for an effective, easy to manage way to block spam and not lose any important customer correspondence. With their previous solution, their IT staff was spending 4 hours a day sifting through "spam filtered" email. NCI installed a cluster of two Mail-SeCure 2060 series devices that prevent spam from entering their network. This approach practically eliminates the spam and also safeguards them for email-based security attacks."

"itravel2000 serves thousands of customers worldwide daily, and our email system is critical for our agents to effectively administer travel plans to customers. By eliminating the large amount of spam, we no longer have to sift through unsolicited emails to find customer data and we are not afraid of missing anything important," said Richard Martin, Director – Information Technology, itravel2000. "We have seen companywide email spam drop to almost zero. PineApp's Mail-SeCure also protects us from malicious, targeted email attacks."

"We have witnessed an evolution in the amount and sophistication of spam attacks," says Steve Curry, VP Channel Sales, PineApp.

"No longer is it simply a junk email asking you to donate money or visit a website. Today's hackers are injecting spam with Trojans, Viruses and other forms of malicious code. Sophisticated spam systems use botnets to deliver emails that prove resilient to most anti-virus and anti-botnet measures. PineApp's layered approach discovers and eliminates these new attack techniques in real-time."

PineApp's Mail-SeCure is an advanced anti-spam and email security appliance that combats evolving email-based threats such as botnets, image and MP3-based spam and sophisticated virus attacks. Mail-SeCure provides unrivaled email security with the integration of five anti-virus engines – three signature based, one heuristic based and one zero-hour detection mechanism – along with 11 anti-spam engines. This approach protects against targeted threats such as Mail-bombing, DoES and Backscatter, as well as non-targeted threats including viruses, spam, worms and Trojan-horses.

For enhanced network security, PineApp also offers Surf-SeCure, an in-line, real-time filtering appliance for internet-based threats and web surfing policy management. Additionally, PineApp's SeCure SoHo offers a complete all-in-one security solution for small businesses. For more information on PineApp security solutions, please visit www.pineapp.com.
