

PineApp's Mail-SeCure Selected by Geotest to Secure Email and Aggressively Block Spam Mail-SeCure 2060 Series Secures Client/Customer Communications and Email Transactions

June 10, 2008, Irvine, California - PineApp™, a global leader in securing networks and email systems, announced that Geotest, a Marvin Group Company based in Irvine, California, has selected PineApp's Mail-SeCure perimeter security appliance to protect the company and its networks from malicious Spam attacks. The Mail-SeCure appliance was chosen to replace Geotest's previous software Spam solution which proved to be ineffective in maintaining optimal email protection.

Geotest selected PineApp after reviewing multiple alternatives, finding Mail-SeCure to provide the highest level of security, ease of use and deployment and most cost effective compared to other appliances and software solutions.

“With our previous installed email solution, it became evident that not only regular Spam, but most important, malicious Spam was getting through the system,” says Ron Yazma VP Software Engineering, Geotest. “As we provide testing equipment and solutions, we consider it imperative that the solutions we use are top tier. Once we installed Mail-SeCure, we saw the number of Spam email that got inside our organization practically drop to none, with absolutely zero malicious emails getting through.”

Mail-SeCure is an advanced Anti-Spam and email security appliance that combats evolving email-based threats. Mail-SeCure provides unrivaled email security with the integration of five Anti-Virus engines along with 11 Anti-Spam engines. This protects against targeted threats such as Mail-bombing, DoES and Backscatter, as well as non-targeted threats including Viruses, Spam, Worms and Trojan-horses.

Geotest specializes in the design and manufacture of PXI and PC-based test equipment including test instrumentation, instrumentation controllers and chassis, test development software and turn-key test systems. Geotest's off-the-shelf products include state-of-the-art software and hardware for the test and measurement market such as ATEasy®, the leading software development environment for A.T.E. applications, a broad range of PXI products, and DIO®, the world's fastest PC-based digital I/O.

Geotest installed the Mail-SeCure 2060 device to protect 75 employees from malicious threats and Spam. Since installation several weeks ago, Geotest has seen a massive reduction in the amount of Spam received with zero malicious attacks.

“Obviously not all Spam solutions in the market are the same, Geotest choosing Mail-SeCure over a leading vendor truly speaks to the power of our solution”, says Jacob Fox, President & CEO, PineApp Corp. “With the morphing of email attacks, the ability to protect against Spam that contains malicious code in real time is a necessity. PineApp offers a layered approach to Spam security that provides all the necessary levels of defense for unsurpassed protection and accuracy.”

For enhanced network security, PineApp also offers Surf-SeCure, an in-line, real-time filtering appliance for internet-based threats and web surfing policy management. Additionally, PineApp's SeCure-SoHo offers a complete all-in-one security solution for small businesses. For more information, please visit www.pineapp.com.

About Geotest

A subsidiary of the Marvin Group, Geotest - Marvin Test Systems, Inc. is a global supplier of PXI and PC-based test products, systems and solutions. Geotest's products and systems are used worldwide in thousands of aerospace, semiconductors, communications, medical, industrial, and military test applications.
