

PINEAPP'S MAIL-SECURE PROVIDES NORTH FLORIDA WOMEN'S CARE WITH UNPARALLELED SPAM BLOCKING AND SECURE EMAIL COMMUNICATIONS

Mail-SeCure 2060 Series eliminates NFWC's previous SPAM influx and loss of productivity

August 05, 2008, Tallahassee, Florida — PineApp™, a global leader in securing networks and email systems, today announced that North Florida Women's Care (NFWC) has utilized PineApp's Mail-SeCure perimeter security appliance to provide the organization with secure email while eliminating a massive amount of spam attacks. The Mail-SeCure appliance was deployed to secure all employee email throughout the organization. NFWC selected Mail-SeCure because of the appliance's ease of installation, usability, unit cost and unsurpassed level of security.

PineApp's Mail-SeCure is an advanced anti-spam and email security appliance that combats evolving email-based threats such as botnets, image and MP3-based spam and sophisticated virus attacks. Mail-SeCure provides unrivaled email security with the integration of multi anti-virus engines with multi layered anti-spam protection. This approach protects against threats such as Mail-bombing, DoES, Backscatter, viruses, spam, worms and Trojan-horses.

“Previously, we were not utilizing a spam solution within our network and our employees were receiving upwards of 200 spam emails a day”, said Julie Sander, IT Technician, NFWC. “We quickly realized that we needed to find a solution that not only fit our email needs, but our budget as well. When we installed Mail-SeCure, the number of spam per employee dropped to virtually zero. The time and manpower saved cleaning our employee email boxes has been amazing, we absolutely love this product.”

NFWC is Tallahassee's premier women's health medical group. For almost twenty years, NFWC has provided obstetric and gynecologic medical care to women who live in and around the Tallahassee area. To maintain its high business standards, NFWC installed the Mail-SeCure 2060 series to protect 75 employees from malicious threats and spam.

Since deployment, NFWC has seen many malicious email attacks blocked and quarantined with an enormous reduction in spam. To this day, NFWC reports that over 50% of all email received are still spam related. PineApp's solution is able to effectively and easily block these messages from reaching employee email accounts.

“Regardless of your industry, company size, or location, spam and malicious email attacks are problems that cause endless headaches and lost resources,” says Steve Curry, VP Channel Sales, PineApp. “Without our product in place, NFWC was subjected to massive amounts of unrequested emails being pushed into its network. These attacks can come at any time and have quickly become more malicious in nature. PineApp provides not only the solution to block spam attacks, but more importantly, eliminate the spam that possesses viruses and other forms of malware.”

For enhanced network security, PineApp also offers Surf-SeCure, an in-line, real-time filtering appliance for internet-based threats and web surfing policy management. Additionally, PineApp's SeCure-SoHo offers a complete all-in-one security solution for small businesses. For more information, please visit www.pineapp.com.

About PineApp
