

Sun and PineApp provide winning solution for Secure Messaging and Email Systems

The Cooperation between Sun Microsystems and PineApp

Under an OEM agreement recently signed between Sun Microsystems & PineApp, Sun will provide the server infrastructure on which the PineApp Mail-SeCure solution is installed. Jill Anolik, OEM Sales Manager, Sun Microsystems, says: in the network where security, performance and efficiency is of prime importance, "PineApp chose to run their next generation of Mail-SeCure 5000 series appliance on the Sun next generation x64 servers. The Sun Fire X4100 M2, Sun Fire X4200 M2 and Sun Fire X4600 M2 servers with on-chip virtualization support set new standards for reliability and energy efficiency. Dan Toledano, Channel Manager Israel, Sun Microsystems adds that the Sun servers are designated for the PineApp Mail-SeCure 5000 series for enterprise, which offers a complete mail security solution for large organizations, up to 10,000 users.

The future plans are to broaden the use of the Sun servers also to the Mail-SeCure solutions 2000 and 3000 series for SME.

PineApp Mail-SeCure solution

Michael Kasan ,VP Customer Relations from PineApp says : “Mail-SeCure is a leading security appliance that protects all sized organizations from both targeted and non-targeted threats. Mail-Secure scans all email traffic and protect the Internal network from known and unknown threats such as viruses, worms Trojan horses, backscatter and spam”.

Mail-Secure’s three anti-virus layer and ten anti-spam engines provide a full security protection suite. The system provides administrators with tools to enforce advanced local policy and provide users with a mechanism to control and manage their mail flow.
